

Here are normal random numbers!

Code chunk:

```
> xx = rnorm(50)
> xx

[1]  1.90643604  0.42555963 -0.35449221  0.02469136 -0.24410204  0.89015276
[7] -0.64467752 -1.60146066 -1.42341398  0.94909919 -2.05776717 -1.36466221
[13]  0.83632526 -0.55225065  1.89336231 -0.42553372  0.28984129 -0.58847668
[19] -2.41072334  0.22070976  1.59680551  1.19361900  0.87071242 -0.45817026
[25]  1.81567639  1.85903781 -0.55445329 -0.09086632 -0.86982856  0.87914537
[31] -0.95506001  0.84485583  0.48263406  0.38772561  0.53302058 -1.43655006
[37] -0.59118302  0.08537778  0.31674951 -0.17516965  0.28023115 -0.33344884
[43] -0.93925238 -0.19102899  0.81623273  1.77826325  1.59008985  0.01548637
[49]  0.82872757 -0.74845922
```

Code chunk with `echo=false`:

```
[1]  0.106770959  0.595794872  1.524982257  0.475959200  0.733591280
[6]  0.286440469 -0.654116848 -1.172081662  0.817928565 -0.757113054
[11]  1.054441453 -0.258896567  0.851430662 -1.982670317  1.140484127
[16]  0.245421147  0.242219834  0.872114989  0.322424166 -0.572272805
[21] -0.904567770  0.462132687 -0.185936530  1.086182453  1.209678262
[26] -1.944206676  2.010641777  0.009879363  0.575520863 -1.700986899
[31]  0.715417520  1.769390177 -1.283052805 -0.766024510  0.502377217
[36]  0.776305761 -0.033859554  1.470265594 -0.287180988 -0.232116076
[41] -0.606146988 -0.411827125  0.620971082 -1.648867223  0.829930631
[46]  1.202867290  0.042416236  0.933040381  1.914577234  1.352352339
```

Just the R code (without any results):

```
> xx = rnorm(50)
> xx
```

And this can be used for exams (no code and no results):

But the mean of `xx1` can be calculated:

```
> mean(xx1)

[1] -0.04916291
```

A figure:

```
> hist(xx)
```

A figure with `echo=false`:

Attempt 1:

The mean is

```
[1] -0.06835212
```

and the SD is

```
[1] 1.111317
```

Attempt 2:

The mean is -0.06835 and the SD is 1.11.

If you prefer more digits, here they are: The mean $\bar{x}$ is -0.06835212163 and the SD σ is 1.111317161.

Or for π : 3.141592653589793116

THE END!
